LIFTING OIL CHANGES TO THE HIGHEST STANDARD

Patented structural design combined with high strength, lightweight material makes the RhinoRamps® as strong as any other ramps on the market, resin or metal

Better by Design

Strength and stability - that was our goal. RhinoRamps® achieve this with a Strong as Steel™ superstructure and integrated Core-Trac™ non-skid feet to reduce sliding during use. Adding our superior tread pattern and wide design make these the most secure ramps on the market. A reduced rise angle also works to accommodate low profile vehicles... a feature most other ramps can't claim!

Space Saving and Lightweight

Our unique, nestable design not only saves space in the consumer's garage but more pieces on a pallet means reducing footprint in the warehouse, on the truck and minimizes space required on the retail shelf. This combined with our lightweight material allows for easy handling and portability making RhinoRamps® the best choice in lifting devices

Drive Type, Grease Fittings

Drive Fittings avoid Tapping Costs in Variety of Applications. Circumferential Serrated Shank provides a Grease Tight Seal when Installed. They also simplify the Replacement of Damaged Fittings in Old or Oversized Holes. Recommended only for Low to Medium Pressure Applications. Drive Fittings must be used where High Lubricant Back Pressures can be Developed.

Holes Sizes and Shank Dimensions Must Be Used as Reference Only. To determine Optimum Hole Size, Test Applications should be conducted using the Type of Material into which the Fitting is to be Installed ex. Aluminum, Brass, Bronze, Cast Iron, Copper, Steel etc. Production Tolerances of Hole Size must be taken into Consideration when Test is Conducted. Use LX-1430 Drive Fitting Tool to Install these Fittings.
